

Credit Name: CSE3110 - Iterative Algorithm 1
Assignment Name: StackList
Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?
No errors. This is a conceptually more difficult unit but the code itself is quite simple, especially if you have previous experience working with a variety of data structures. I have nothing else I can write here, I apologize for the lack of content.
I don't really have anything to write in any of these, so I'll just copy the same log.
