

Credit Name: CSE2130 File Structures & Exception Handling

Assignment Name: WordCount

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

No errors, one bug which was weird but fairly quickly fixed.

I had a bug where it was skipping some words. I realized the cause was that it was only adding a word to the ArrayList when reaching a space, but the words at the end of each line had no space at the end.

The previous version also wiped the word each time it looped to a new line (which I realized was redundant) so it was essentially deleting the last word of each line

I fixed this by adding the code highlighted in red below

```
if (character == ' ' || i == line.length()-1)
```
