

Credit Name: CSE3130 Object Oriented Programming 2
Assignment Name: UEmployee
Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?
I did not run into any errors as it is a simple data storage program, and I have done similar OOP many times before. I have nothing else I can really write here, I wrote the program without testing and it worked immediately because there is not all that much to it.
