

Credit Name: Computer Science 3										
Assignment Name: BreakAPlate										
Decribe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?										
Again, no errors. I apologize for writing nothing of substance here but I don't really have anything to document. I had no bugs or errors and the only thing I didn't know how to do (images), I learned by testing code from the textbook and somehow got it working with no issues
