Credit Name: Computer Science 3																
Assignment Name: BreakAPlate																
How has your pro	gram changed fr	om planning to co	ding to now? Plea	ase explain?												
It has not changed. Through this project I did learn how to use images which is kind of interesting. I had not previously been aware that a JLabel could display anything but text. I learned how to add these images by analyzing the textbook code and then wildly guessing at how it works, and somehow got it working very quickly without issue.															issue.	
I did add a couple visual and internal changes not in the textbook, but the program hasn't really changed. I did not return to Chapter 7 to find the original class, and instead wrote my own code embedded in the GUI to more efficiently achieve the same result. The visual changes are just little things to make the output look nicer, like the Box objects.															Box objects.
