Credit Name: CSE2130 File Structures & Exception Handling																										
Assignment Name: WordCount																										
How has your program changed from planning to coding to now? Please explain?																										
The program hasn't really changed much. I had to make a small change due to lack of foresight as shown in the Error/Bug Log, but it was quite a small change.																										
Since completing the last credit, I decided I wasn't taking the code standards seriously enough. This time I made sure to add proper method comments and keep methods as short as possible (with the exception of initialize, which is definitely not accounted for)																										
The program ov	program overall was confusing at first, so I essentially just started messing around programming what I thought would work on a basic level to test ideas and then expanding it. This is where the bug came from- the lack of foresight caused it to skip some words.																									
As a whole it can	me together quite	well, as my intial i	deas luckily work	ed well enough th	at I didn't need to	make major chan	ges. It was very s	atisfying to test ar	d see it working (mostly) for the first	st time after writin	g a bunch of hesit	ant code that was	As a whole it came together quite well, as my initial ideas luckily worked well enough that I didn't need to make major changes. It was very satisfying to test and see it working (mostly) for the first time after writing a bunch of hesitant code that was equally likely to work or break completely in half a dozen places.
