Credit Name: Computer Science 3

Assignment Name: BreakAPlate

How has your program changed from planning to coding to now? Please explain?

It has not changed. Through this project I did learn how to use images which is kind of interesting. I had not previously been aware that a JLabel could display anything but text. I learned how to add these images by analyzing the textbook code and then wildly guessing at how it works, and somehow got it working very quickly without issue.

I did add a couple visual and internal changes not in the textbook, but the program hasn't really changed. I never intended to go back to Chapter 7 and find the referenced class when I could write it simpler with a few lines of code in the same class. The visual changes are just little things to make the output look nicer, like the Box objects.
